POWERplus® Seal

Solar powered
WEATHERSTATION
Clock/Calendar/Thermometer

The POWERplus Seal is a state-of-the-art solar powered weather station, clock and calendar.

Featuring the World's first solar powered barometer made possible by using highly energy efficient technologies

The highly accurate sensors of the Seal measure the weather conditions such as actual pressure, development of pressure during the day and temperature and can therefore give a good indicative forecast of the weather.

The high quality solar panel is integrated in the base of the Seal and becomes a natural part of the beautiful design of the product.

The solar panel charges the internal Ni-MH batteries, so even without sunlight the Seal can make its measurements and display the information. For periods of no sunlight over a long time, the Seal has the option of a back-up battery.
